Running Safe App Locally Guide

Where is the project hosted?

The project is hosted on Github and uses the git version control system. The link to the project is https://github.com/franciscomejiacalles/accessibilityapp.

How do I checkout the project on my computer?

To checkout the project, open the terminal and execute run the following command:

git clone https://github.com/franciscomejiacalles/accessibilityapp.git

Note: You must have the git command installed on your computer for the above command to work.

How do I run the project on Android Studio?

Open the Android Studio project by clicking File -> Open and then selecting the 'SafeApp' folder that was previously downloaded through Git. When the project loads, click on the 'Run' tab inside Android Studio and then select the first option called 'Run app'. The emulator should load the application and you should see the application running inside the emulated device.

Note: You must first install a virtual emulator through Android Studio. This emulator emulates a real phone where the application is executed. For instructions on how to setup a virtual device, follow this link: https://developer.android.com/studio/run/managing-avds .
